## INVESTMENT OBJECTIVE

The objective of the Fund is to provide long-term capital appreciation by investing primarily in equity (and equity equivalent) securities of individual companies, as well as exchange trade funds ("ETFs"), listed on securities exchanges in North America. In addition the Fund may, on occasion, partially or completely exit individual equities, and the stock market in general, in favour of cash and/or short-term money market securities. When fully invested in individual company equities, the portfolio advisor expects to generally hold securities of between 15 and 30 issuers. The tactical and technical nature of some of the strategies implemented by portfolio advisor may result in the Fund undergoing relatively quick shifts in industry and sector allocations, as well as overall asset allocation into and out of equities.

## INVESTMENT STRATEGIES

The Fund is a non-traditional investment vehicle that seeks to generate long term capital growth in excess of the major North American equity indexes. The Fund invests in companies that possess strong earnings momentum, earnings revision and relative price strength. The Fund is tactical in nature and may at times be materially over or underweight certain sectors of the market. The Fund utilizes a technical sell discipline to manage downside risk and may completely exit the equities in favor of investment in less correlated asset classes such as cash, bonds, or precious metals.

- The Fund provides exposure to companies with superior earnings performance in strongly trending sectors of the market.
- The Fund employs a hardwire sell discipline and has the flexibility to completely exit the equity market during extended periods of stress.
- The Fund's investment process is responsive to quickly changing market conditions. We do not use leverage, short securities, or invest in illiquid securities.
